On the basis of a series of propaganda materials on 'G20 and China', the book classifies and compiles the featured theme interpretations of ten authors following the themes of economy, finance, green and so on, and restores the footnotes and references which have been deleted for the convenience of reading to make the content more authoritative and persuasive. The book is aimed to introduce China's experience and attempt in various specific economic development fields to the world and provide a dose of 'Chinese prescription' for the sluggish-growing economy in the new normal of world economy.

5. Government publications – Malaysia

Making the Past Present for the Future: Integrated Heritage Conservation through Geopark Model is about heritage conversation in general and specifically about Langkawi Geopark as a model for integrated heritage conversation as well as model for sustainable development. Heritage conversation aims at safeguarding heritage, seen as belonging to the past, from human practices of the present that are considered to be harmful. The heritage then is transmitted to the future generation while its accessibility to the present generation is ensure. Not only that, heritage conservation helps a community to protect its economically valuable physical assets and to preserve its history and environment besides protecting the community's sense of identity and continuity. Through reading this book, which contain nine chapters in all, its is hoped that readers can appreciate the efforts taken by the various stakeholders and the challengers that they faced in order to conserve heritage in Langkawi Geopark and subsequently contribute to sustainable development. The book will benefit the readers, especially those who are concerned about the loss of heritage consequent to the past-paced development process of Malaysia. The book will also contribute to a better and deeper understanding of Langkawi Geopark in general and Langkawi Geopark as a model for integrated heritage conservation.

3. Smog – Southeast Asia
4. Haze – Southeast Asia
5. Burning of land – Environmental aspects – Southeast Asia

"A collection of insights from experts of various fields, and will entail discussions of the recurring haze problem in Southeast Asia. It discusses multiple aspects of the haze problem. What is the cause of the haze? Who are the perpetrators and victims? What are the impacts and costs of the haze? Why has the haze problem persisted for decades? Are there prospects of resolving the pollution? How should we analyze the issue? Which solutions are more or less effective than others? How can we involve the stakeholders? The book provides a wide range of views on the haze problem. Written in a simple and accessible manner, these books allow the readers to easily access across different fields and develop a deeper understanding of the haze"

\$ 40.00 / null

450 gm.

This book is a collection of historic and repeat photographs of the landscapes, forests, villages, glaciers, and people of the Mount Everest region of Nepal over the past 65 years. Most of the historic photographs were taken in the early 1950s by the first western explorers, climbers, scientists, and cartographers to the Khumbu region, which I have been replicating in the course of my work and research in the Khumbu over the past 30 years. In doing so, a fascinating collage of change emerges that has taken place in the interim, much of it good, some of it unanticipated and uncertain. The purpose of the book is to capture a record of this change that otherwise would be lost, especially for the younger generations of Sherpa people who, in spite of the Khumbu region's relative remoteness, are growing up in a world far, far different than that of their parents and grandparents. It is my sincere hope that this book will be enjoyed by both Sherpa and Everest region aficionados alike, the latter including trekkers, climbers, scholars, and naturalists. It certainly has been fun creating, with each photo pair evoking fond memories of the hundreds of days and thousands of kilometers spent in the field retracing the footsteps of the early climbers, scientists, and explorers. In the interim, a new generation of professional Sherpa photographers and scientists has emerged; perhaps they will produce a sequel of this book using their own repeat photographs in the years to come.

3. Birds – Philippines – Quezon City – Collection and preservation

A Field Guide to Flight gathers bird sightings on three campuses in Quezon City, Philippines: Ateneo de Manila University, University of the Philippines Diliman, and Miriam College. The school grounds have been host to and habitat of diverse species, both migrant and resident. In this unprecedented collection, author Amado C. Bajarias Jr., with paintings by Oscar M. Figuracion Jr., provides a birder's eye view to guide who want to take the field and look up at the sky.
